CASE STUDY

P'PIZZERIA APPLICATION FOR ANDROID

CLIENT SIDE SUMMARY

The Client required a mobile device POS application to facilitate his Restaurant with paperless and quick ordering system. Client was seeking new ways to get food items order through mobile instead of noted down in to papers that helps their waiters to handle his customer quickly.

THE CLIENT

Client: Restaurant Owner | **Location:** Canada | **Industry:** Restaurant & Bar

SURETEK SOLUTION

Suretek developed a perfect Point of sale android application that matches all the requirement of the client. We designed and developed a visually engaging and interactive application for our client. P'Pizzeria application displays each item with price on intuitive, high graphics and custom layouts. P'Pizzeria allows owner to add new item on his database. Now cashier can calculate table wise bill and total income of restaurant's season with one click that decrease transaction time. P'Pizzeria facilitate waiter to serve more customer in less time and it also shows notification for not visited table.

APPLICATION CAPABILITIES

- Landscape and portrait displays
- Intuitive and custom UIs
- Visually engaging content display
- Showing total item with price
- Notification for not visited table

TECHNOLOGIES USED

- Android SDK(2.2, 2.3.3 latest in market)
- Java(1.7.0)
- SQLite Database(3.7.4) used for application data storage
